

Series LLU61X

Long Stroke LVDT Displacement Transducer, DC,
Unguided Armature

Description

The Series LLU61X is a high performance long stroke DC powered LVDT displacement transducer with an unguided armature. For the very basic unguided configuration, the armature is loose fit in the bore of the LVDT and is attached to the moving part by a male thread. Precise alignment along the bore results in a frictionless movement. The Series LLU61X is ideal for mechanical vibration measurements. In addition, the armature can be separated from the body without disconnecting either part. The Series LLU61X displacement transducers can be used for both static and dynamic applications. This position sensor operates from unregulated power supplies of +20Vdc to +40Vdc or dual ± 10 Vdc to ± 20 Vdc and generates either a ± 5 Vdc or 0-10Vdc. The compact size of the LLU61X series makes it ideal for applications requiring limited space. These displacement transducers are ruggedly constructed of all stainless steel. All Series LLU61X displacement transducers are shipped with traceable calibration certificates.
