

# T20WN

## Torque transducers

### Special features

- Nominal (rated) torques 0.1 N·m, 0.2 N·m, 0.5 N·m, 1 N·m, 2 N·m, 5 N·m, 10 N·m, 20 N·m, 50 N·m, 100 N·m, 200 N·m
- Accuracy class: 0.2
- Contactless transmission of measurement signals
- Measurement on rotating or stationary parts
- Cylindrical shaft ends for non-play friction joints
- Integrated measurement system for rotational speed and angle of rotation
- Torque output signal  $\pm 10$  V

### Installation example with bellows couplings

Two of the couplings provided are needed for this example

## Specifications – T20WN

Type	T20WN												
Accuracy class	0.2												
<b>Torque measuring system</b>													
Nominal (rated) torque $M_{nom}$	N·m	0.1	0.2	0.5	1	2	5	10	20	50	100	200	
Nominal (rated) sensitivity (nominal (rated) signal range between torque = zero and nominal (rated) torque)	V	10											
Sensitivity tolerance (deviation of actual output quantity at $M_{nom}$ from nominal (rated) signal range)	%	± 0.2											
Output signal at torque = zero	V	0 ± 0.2											
Nominal (rated) output signal													
at positive nominal (rated) torque	V	+10											
at negative nominal (rated) torque	V	-10											
Load resistance	MΩ	> 1											
Long-term drift over 48 h	mV	< ± 50											
Cut-off frequency (-3 dB)	Hz	200											
Residual ripple	mV <sub>PP</sub>	< 80											
Group delay	ms	< 1.0											
Temperature effect per 10 K in nominal (rated) temperature range													
on the output signal, related to the actual value of the signal span	%	± 0.1											
on the zero signal, related to the nominal (rated) sensitivity	%	± 0.2											
Power supply													
Nominal (rated) supply voltage (separated extra-low voltage (SELV))	V (DC)	12 (10.8 – 13.2)											
Calibration signal triggering	V	5 – 13.2											
Current consumption in measuring mode	A	< 0.2											
Nominal (rated) power consumption	W	< 2.4											
Max. ripple on supply voltage	mV <sub>pp</sub>	200											
Non-linearity including hysteresis, related to nominal (rated) sensitivity	%	< ± 0.1											
Relative standard deviation of the repeatability per DIN 1319, related to the variation of the output signal	%	< ± 0.05											
Calibration signal	V	+10 ± 0.2%											
<b>Measurement system for rotational speed/angle of rotation</b>													
Measurement system		optical											
Pulses per revolution	Number	360											
Output signal	V	5 (asymmetrical); two square wave signals approx. 90° phase shifted											
Minimum rotational speed for sufficient pulse stability	min <sup>-1</sup>	0											
Load resistance	kΩ	> 10											
Group delay	μs	< 3											
		for 1.5 m cable between T20WN and junction box VK20A (without VK20A, the group delay is dependent on the connected impedance / cable & evaluating device)											
Max. measurable rotational speed	min <sup>-1</sup>	3000											
<b>General data</b>													
<b>EMC</b>													
<b>Immunity from interference (DIN EN50082-2)</b>													
Electromagnetic field													
Housing	V/m	10											
Leads	V <sub>PP</sub>	10											
Magnetic field													
Burst	kV	2/1											
ESD	kV	4/8											

## Specifications – T20WN (continued)

<b>Balance quality level per DIN ISO 1940</b>	-	G 6.3										

<sup>1)</sup> Each type of irregular stress (bending moment, lateral or longitudinal force, exceeding nominal (rated) torque) can only be permitted up to its specified static load limit, provided none of the others can occur at the same time. If this condition is not met, the limit values must be reduced. If 30% of the limit bending moment and lateral limit force occur at the same time, only 40% of the longitudinal limit force is permissible and the nominal (rated) torque must not be exceeded. The permissible bending moments, longitudinal forces and lateral forces can affect the measurement result by approx. 1% of the nominal (rated) torque.

<sup>2)</sup> Note the maximum moment ( $T_{Kmax}$ ) of the coupling.

<sup>3)</sup> The nominal (rated) torque must not be exceeded.

<sup>4)</sup> Relative undulations, following DIN 45670/VDI 2059.

When ordering, please specify: connection holes  $D_2$  as requested by the customer within specified limits; boring tolerance H7.

When using with just **one** bellows coupling, specify the mounting side of the coupling:

**Measuring side = 6 mm / drive side = 8 mm.**

## General instructions

- Only tighten the clamping bolts of the couplings when the shafts are mounted in the coupling hubs!
- The bellows coupling must not be overstretched beyond the specified permissible flexibility limits.
- Drive and output shafts must be free from grease and burrs.
- Implement a tolerance of j6 for the shaft diameter, to produce the preferred fit of H7/j6.

## Mounting position

The T20WN torque transducer can be operated with bellows couplings in any mounting position (horizontally, vertically or at an angle). When mounting vertically or at an angle, please make sure that the additional elements are adequately supported.

## Condition at the time of delivery

The couplings and the torque transducer are delivered as separate items.

## Accessories for the T20WN, to be ordered separately

Transducer connection cable, 5m long, order no. 3-3301.0158

Transducer connection cable, 10m long, order no. 3-3301.0159

Cable socket, 12-pin (Binder), order no. 3-3312.0268

Junction box, order no. 1-VK20A

Bellows couplings
