Modal Exciters — Types 4827 and 4828

Designed for demanding large structure modal test applications, electrodynamic Modal Exciters Types 4827 and 4828 provide users with precise, reliable, stable and long-lasting operation. The highest quality materials, rugged construction and stringent quality control provide a versatile modal excitation instrument, which can be employed in any experimental modal test

The two modal exciters are available as stand-alone units – supplied with the appropriate trunnion, blower and connecting cable only – or as complete systems (Types 3627 and 3628), with centering unit, matching power amplifier and field power supply.

Optional accessories include traditional push/pull stingers, tension wire stingers, turnbuckles, hose and cable extension kits, chuck nut assemblies and various adaptors.

Uses

- General mechanical mobility measurements
- Experimental modal analysis on most mechanical structures
- SISO, MISO, SIMO and MIMO modal test applications
- Advanced structural dynamic investigations
- Structural damage detection

Features

- Force rating 650 N sine (Type 4827) and 1000 N sine (Type 4828) (with forced air cooling)
- Rugged, industrial design
- Can be delivered as a complete turnkey excitation systems (Types 3627 and 3628)
- High force-to-weight ratio
- 2" peak-to-peak displacement for best low-frequency excitation
- High-rigidity, low-mass magnesium armature for minimised force drop-offs at resonance frequencies
- Wide frequency range
- Low stray magnetic field
- Built-in air switch for protection against damage related to excessive current
- Blocked forced air cooling with installation of Squeak and Rattle Option WQ-2553 (maximum operating time is 2 hours)
- Electronic DC control of tension wire pre-tensioning
- Full range of stingers – tension wire technology (only electrical pre-tensioning) as well as traditional push/pull stinger technology (optional)
- Built-in optical sensor for accurate determination of armature position
- Ideal for any excitation signal (sine, impulse or random based signals)

Description

In order to function properly, both of these modal exciters, in combination with Power Amplifier Type 2721, require a Field Power Supply Type 2830 and a DC Static Centering Unit Type 1056. Field Power Supply Type 2830 provides the necessary current to the electromagnet, while DC Static Centering Unit Type 1056 provides armature “suspension” and correct centering of the armature relative to the exciter’s housing and the test specimen. Available as a complete system with modal exciter, auxiliary hardware and all necessary cables, Types 4827 and 4828 become Types 3627 and 3628, respectively.

Precise centering of the armature requires that DC Static Centering Unit Type 1056 and the modal exciter are calibrated together. When a modal exciter is delivered as part of a complete Modal Exciter System Type 3627 or 3628, it comes calibrated (matched) with the DC Static Centering Unit Type 1056. If the exciter and static centering unit are not purchased together, they must be calibrated before use.
